NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
  char item;
  struct Node* next;
  struct Node* prev;
};
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
 //type your code here
 struct Node *newnode = (struct Node*)malloc(sizeof(struct Node));
 newnode->item = item;
 if(*head==NULL){
    newnode->next=NULL;
    newnode->prev=NULL;
   *head = newnode;
```

```
}
 else{
    newnode->next=NULL;
    struct Node *pos = *head;
    while(pos->next!=NULL){
      pos=pos->next;
    newnode->prev=pos;
    pos->next=newnode;
 }
void displayForward(struct Node* head) {
  //type your code here
  struct Node* pos = head;
  while(pos!=NULL){
    printf("%c ",pos->item);
    pos = pos->next;
  }
  printf("\n");
}
void displayBackward(struct Node* tail) {
  //type your code here
  struct Node* pos = tail;
  while(pos!=NULL){
    printf("%c ",pos->item);
    pos = pos->prev;
  }
  printf("\n");
void freePlaylist(struct Node* head) {
  //type your code here
  free(head);
int main() {
  struct Node* playlist = NULL;
  char item:
  while (1) {
    scanf(" %c", &item);
    if (item == '-') {
```

```
break;
}
insertAtEnd(&playlist, item);
}

struct Node* tail = playlist;
while (tail->next != NULL) {
   tail = tail->next;
}

printf("Forward Playlist: ");
displayForward(playlist);

printf("Backward Playlist: ");
displayBackward(tail);

freePlaylist(playlist);

return 0;
}
```

Status: Correct Marks: 10/10
